ROBOT-BASED AUTOMATION OF WELDING PROCESSES

Robot-based automation increases the efficiency of welding processes. Industrial robots raise the productivity, while minimizing scrap and increasing quality.

ABB provides a wide range of solutions from robotic cell with only one robot to complete robot automation manufacturing cells with multiple robots and positioners.

Robotic welding cells consist of a robot manipulator, a positioner and a welding robot, and are designed to deliver maximum performance whilst making optimum use of the space available.

EuroTehnika d.o.o.

Eurotehnika is a legal representative of the Fronius products

HSTEC is the official partner of the company ABB Robotics in the field of robot-based automation
